Reviewer's Comment for Publication.

(To be published with the manuscript in the journal)

The reviewer is requested to provide a brief comment (3-4 lines) highlighting the significance, strengths, or key insights of the manuscript. This comment will be Displayed in the journal publication alongside with the reviewer's name.

Detailed Reviewer's Report

REVIEWER'S REPORT

1. Please write citations in APA format
2. Please correctly number the figures and tables
3. Also mention the sources under the figures and tables as per the APA format
4. Mention References in the APA format
5. Expand the literature review

After reviewing the paper titled "Demographic Trends and Socio-Economic Disparities in Kamrup District: A Case Study of Rajapat Village, North Gauhati, Assam," I appreciate the paper's efforts to shed light on the demographic trends and socio-economic challenges faced by a rural community in Assam. The focus on Rajapat village provides a localized and insightful perspective into the broader regional dynamics. The study touches upon critical issues such as population growth, educational attainment, income disparities, and access to basic services, all of which are significant for understanding socio-economic development in rural India.

Strengths of the Paper

1. **Relevance and Timeliness:** The topic of demographic trends and socio-economic disparities is highly relevant, especially in the context of rural India, where socio-economic disparities often shape the living standards of communities. This research highlights the pressing need to address these disparities in the face of rapid urbanization, migration, and development challenges.
2. **Focused Case Study:** The case study of Rajapat village provides a concrete example of demographic trends and socio-economic challenges in a specific rural setting. This localized focus is commendable and offers readers an in-depth understanding of issues that might be applicable to other similar villages in the region.
3. **Comprehensive Analysis:** The paper successfully integrates demographic data and socio-economic factors, making a strong connection between population growth and its effects on local economic conditions, education, healthcare, and employment.

Suggestions for Major Revisions

1. **Expanded Literature Review and Theoretical Framework**
The literature review could be expanded to include more recent studies and theoretical frameworks related to socio-economic disparities in rural India. While some previous works are referenced, a deeper analysis of studies focusing on Assam or similar regions would provide a stronger foundation for the research. Incorporating theories from economic development, migration studies, and rural sociology could offer a more structured lens to interpret the findings.
Suggestion: Expand the literature review to cover more recent publications and integrate a variety of socio-economic development theories. This will help situate your findings within the broader academic conversation.
2. **Data and Methodology Clarification**
The methodology section would benefit from greater detail, particularly regarding the data collection process. It is unclear how the data was collected (e.g., surveys, interviews, government records) and the sampling techniques employed. A more thorough explanation of the study's research design, such as how representative the sample is of the broader population in Kamrup district, would help improve the transparency of the research.
Suggestion: Provide a more detailed description of your data collection methods, including the sample size, the instruments used (such as surveys or interviews), and how the data was analyzed.

REVIEWER'S REPORT

3. **Quantitative and Qualitative Data Integration**

While the paper effectively discusses socio-economic disparities, it would be greatly enhanced by integrating both quantitative and qualitative data to support your analysis. For instance, quantitative data such as income levels, literacy rates, and employment statistics could be paired with qualitative insights from interviews or community observations to provide a more holistic view of the issues at hand. **Suggestion:** Integrate qualitative data (e.g., interviews or focus group discussions) alongside the quantitative data to offer a richer, more nuanced perspective of the socio-economic conditions in Rajapat village.

4. **Socio-Economic Disparities Analysis**

The analysis of socio-economic disparities could be more detailed. While income and education are mentioned, the paper does not fully explore other important factors like caste, gender, land ownership, and access to social welfare programs. These elements are often central to understanding socio-economic inequalities in rural areas, and their inclusion would deepen the study's insights.

Suggestion: Include a more detailed analysis of factors such as caste, gender, land distribution, and access to government welfare programs. These are key elements that contribute to socio-economic disparities in rural communities.

5. **Policy Implications and Recommendations**

While the study highlights significant socio-economic challenges, there is limited discussion on how these issues can be addressed. The paper would benefit from providing specific policy recommendations or suggestions for intervention, based on the findings. For instance, the role of local government in improving access to education, healthcare, and economic opportunities could be explored in greater depth.

Suggestion: Include a section on policy recommendations or intervention strategies based on the findings of your study. This could include suggestions for local government, NGOs, or community-based initiatives aimed at reducing socio-economic disparities in Rajapat village.

6. **Incorporating Visuals for Data Presentation**

The paper could benefit from the inclusion of tables, charts, or graphs to better illustrate the demographic and socio-economic data. This would help readers visually grasp the trends and disparities discussed in the paper, making it more accessible and easier to follow.

Suggestion: Include visual aids, such as tables, bar charts, or pie charts, to present demographic and socio-economic data more clearly. This will enhance the readability and impact of your findings.

7. **Discussion of Limitations**

The paper would benefit from a section discussing the limitations of the study. For example, the research may have constraints in terms of sample size, data availability, or regional generalizability. Acknowledging these limitations would add transparency and show the authors' awareness of the study's boundaries.

Suggestion: Include a discussion on the limitations of the study, particularly regarding data collection, sample size, or any other factors that might have impacted the research.

Conclusion

Overall, the paper offers valuable insights into the demographic trends and socio-economic disparities in Rajapat village, contributing significantly to the understanding of rural socio-economic challenges in Assam. With the suggested major revisions, including a more detailed literature review, clearer methodology, deeper socio-economic analysis, and policy recommendations, the paper has the potential to make a stronger contribution to the field of rural studies and development economics.

REVIEWER'S REPORT

I recommend accepting the paper for publication after these revisions are made. I believe that with these adjustments, the study will be even more impactful and provide a comprehensive resource for policymakers and researchers working on rural development in India.
