Reviewer's Comment / Report

General Evaluation:

This case report presents a well-documented and detailed analysis of a rare presentation of bilateral benign hemorrhagic adrenal cysts in a patient with Beckwith-Wiedemann Syndrome (BWS). The study effectively highlights the diagnostic challenges, differential diagnoses, and management approach. The report is clinically significant, as it provides valuable insight into the early detection, radiological evaluation, and surgical intervention for such cases.

Strengths:

1. **Clinical Relevance & Novelty:**

- The paper presents a rare case of **bilateral adrenal cysts** in BWS, an uncommon but clinically significant finding.
- The discussion of differential diagnoses enhances its educational value for clinicians.

2. **Clear and Well-Structured Abstract:**

REVIEWER'S REPORT

- The abstract **concisely summarizes** the case, highlighting its relevance and key findings.
 - The differential diagnoses considered and the **importance of multidisciplinary management** are well addressed.
3. **Comprehensive Case Presentation:**
- The clinical course is thoroughly described, from **prenatal detection to postnatal assessment and management**.
 - The inclusion of **maternal history, birth details, clinical examination, and imaging findings** makes the report robust and well-documented.
4. **Use of Diagnostic Imaging & Histopathology:**
- The study effectively emphasizes the **role of imaging techniques (ultrasound, MRI)** in diagnosis and surgical decision-making.
 - The **histopathological confirmation of a benign hemorrhagic cyst** provides strong evidence for the final diagnosis.
5. **Logical Flow & Differential Diagnosis Consideration:**
- The case is **systematically analyzed**, with a logical progression from **clinical suspicion to differential diagnosis, investigations, surgery, and confirmation**.
 - The discussion of **neuroblastoma, cystic lymphangioma, and adrenal cortical adenoma** as differentials enhances its diagnostic depth.
6. **Management & Follow-up Plan:**
- The emphasis on **postoperative monitoring and multidisciplinary follow-up** strengthens the clinical applicability of the case report.
 - The discussion of **tumor surveillance strategies (AFP monitoring, abdominal ultrasounds)** adds practical value.
-

Final Verdict:

✓ Overall, this case report is well-structured, clinically relevant, and contributes valuable insights into the management of adrenal cysts in BWS.
